Key words: *green economy of Uzbekistan, economic stability, renewable energy, ecological policy, green technology, resource efficiency , economic development, protection of the environment.*

Abstract: *Green economy development is a global challenge, and countries are trying to balance economic growth with environmental sustainability. This article explores the achievements and challenges of green economy development in Uzbekistan, which has a rich history and diverse ecosystems.*

Keywords: *green economy of Uzbekistan, economic stability, renewable energy, environmental policy, green technologies, resource efficiency, economic development, environmental protection*

the world community right now of our time the most current from problems one is the climate o' change with clash is coming Whole the world countries industrialization and fast economic grow consequences with fight is stable and ecological responsible economic development necessity more and more important importance occupation is doing This point of view from the point of view , Central of Asia at the intersection is

located Uzbekistan ecological problems solution reach with together , economic to prosperity of aspiration solution doer in the circuit is standing in Uzbekistan green of the economy development seeing exit , of the country to stability loyalty and economic growth and environment protection to do between harmonious together to live promising potential lighting important is considered

Our country history his rich village economy legacy and the first in line cotton to the industry dependent has been resources a lot consumption who does economy with connected was However , this of the model long term stability , first Next , the island of the sea dry and natural of resources decrease such as ecological damage because of question under left This acknowledged the problems without sustainability , the environment protection to do and economic grow principles mutually depends has been green the economy to create our country very big strength by spending positive to the results is being achieved .

Green of the economy basis resources efficiency , carbon waste reduce and again recoverable energy sources attention focus in principles lies Our country economic the approach change necessity current to the matter turned without industry the landscape to change directed wide comprehensive reforms done is increasing . of the country views to the environment negative the effect minimize with together economic development encourage importance emphasizing Green development in the strategy embodied . Green economy for politics basics Green to the economy reach for in Uzbekistan of the economy different fields cover receiver wide comprehensive politics basics acceptance done This political reforms the following main to areas directed : Again recoverable energy Uzbekistan the sun and the wind energy such as again recoverable energy sources big investment entered Government again recoverable energy projects development encourage for benefits and regulatory and legal bases current did Energy sources diversification to do through Uzbekistan carbon footprints reduce and digging removable to fuel dependence to reduce goal did

Stable village farm in Uzbekistan village economy field country in the economy important place holds Stability provide for the government water resources efficient manage and stable farming practice according to programs done increased . This initiatives village economy efficiency increase and to the environment the effect to reduce directed .

Water resources manage Uzbekistan water of scarcity serious to problems face is coming basically cotton cultivation for water resources wide use with depends Government from water use practice improvement , including irrigation systems modernization to do and from water thrifty crops cultivation initiatives before pushed .

Biological diversity storage Biological diversity storage green of the economy important aspect is considered Uzbekistan his own unique ecosystems and lost leave danger under standing types protection to do regarding efforts done is increasing . Protection to be done natural regions organize reach and wild nature protection to do

about the law documents performance provide this of effort indispensable is part of Difficulties and opportunities Green to the economy loyalty despite , Uzbekistan stable development on the way one how much to problems face is coming To these difficulties the following includes :

Economical growth Green to the economy transition most of the time significant expenses and there is of networks interruption own into takes Uzbekistan economic stability provide and stability provide for this to pass attention with manage need

Technological spaces Green technologies and practices acceptance to do serious technological require achievements can Uzbekistan this spaces eliminate reach for international partnership and knowledge from the transfer benefit to see can

Behavior change Green politics successful done increase for the government own citizens and enterprises between behavior to change encourage need In this regard population between take going propaganda and encourage important role to play can of Uzbekistan possibilities between green projects for international from funding use , climate in global initiatives on participation reach and stable development according to regional to the leader rotation enters Uzbekistan green the economy apply through economic to grow encourage with together ecological problems solution to do can in Uzbekistan green the economy development more stable and prosperous to the future reach on the way solution doer is a step . of the country again recoverable energy sources , stable village economy , water resources manage and biodiversity to keep own into received stability to provide a lot edged approach ecological problems solution to do that he is striving for shows . Problems there is although , of Uzbekistan international cooperation potential and rich natural resources successful green the economy development for opportunities creates of the government this to initiatives constant faithfulness stable and ecological clean Uzbekistan create for important strategy.

In conclusion: Above note reached passed national economy competitiveness increase and population marriage level improve with one in the line , " green on the basis of economy stable development provide also country economy for important importance occupation is enough In this the future generation again for non-recoverable of resources use enable increase need That is again recoverable of resources efficient to use current reach necessity and of resources reasonable to use current to do it is necessary
