## METHODS OF TEACHING ENGLISH LANGUAGE FOR PRESCHOOLERS AND PRIMARY SCHOOL STUDENTS

**Uktamova Shohsanam Usmonjon qizi**

Uzbek State University of World Languages

Student of the Faculty of English Philology

***Annotation.** The article covers preschool and primary school lessons in foreign languages the importance of integration and the use of innovative technologies illuminated. Prospective primary school teachers teach students The process is carried out on the basis of integration with foreign languages, their social life and to be able to use them effectively in scientific activities.*

**Keywords.** *Integration, innovation, research, technology, information and communication, innovative technology, fundamental research, practical research.*

Modernization of the education system of the republic The main purpose of the large-scale work carried out in the direction of The goal is to improve the quality and effectiveness of education for the younger generation to bring them up as faithful children of their country and to give them a solid education.

The whole condition for - is to create the conditions. Our President Sh. Mirziyoyev In his speeches, he said, "Our young people are independent-minded, highly intellectual and has the spiritual potential to be equal to any of its peers around the world We will mobilize all the forces and capabilities of our state and society to grow and be happy as people who are busy in the field." emphasized in [1].

Nowadays, learning a foreign language opens the door to many opportunities It is no secret that it serves to open. Therefore, a foreign language teaching system reform, modern pedagogical and information-communication in the classroom use advanced teaching methods using technology has become one of the most pressing issues in education. Foreign to elementary school students introduction of new modern pedagogical technologies in language teaching and requires implementation in practice. Currently in training a number of modern pedagogical practices that are applied and yield positive results there are technologies, the most important of which is pedagogical to the education system is to introduce innovations.

Any innovation in the education system cannot be an innovation. For this reason, showing the main differences between the concepts of 'innovation' and 'innovation' need to go to do this, the specific form of reform must be timely and comprehensive if it does not have a system feature, then only some of the specific system in itself if the task is to change the elements, then we are with innovation we will communicate The goal of innovation is to invest money or is to get the highest result from the power. All other districts appear spontaneously Unlike

upcoming news, innovation is manageable and controllable is a mechanism of change [2].

Different in the learning process through logical systems, the teacher and the students share their knowledge, develops skills and abilities. All logical processes are style forms the inner side, which is inextricably linked with the content.

The method, methodology and characterized by a variety of forms. Integration is different for students confirming or deepening scientific observations and conclusions is a source of finding new evidence. They exchange different forms of activity prevents students from getting tired and nervous. Education the idea of integration along with stratification and individualization in public education began to be discussed. Based on the stratification of small school education level of readiness to work independently with books, textbooks and other literature and requires the active formation of small school-age interests, some of which are objects of study of different disciplines as a basis for integration general concepts can be deepened, clarified, and expanded.

The main goal of integrating education is nature and education in primary school laying the foundations for a better understanding of society and their development to form their own attitude to the laws. It is foreign in enriching the imagination it is also advisable to use language.

The scope of this today can be seen. Modern teaching technologies are widely used in education. Because teaching using modern teaching methods. It is no secret that it leads to high efficiency in the process. Education based on the didactic function of each lesson in the selection of technologies The choice is reasonable.

Integrated foreign language teaching in primary school formation of students' oral and written speaking skills, spelling and methodology such as literacy and the development of creative and independent thinking skills implies the realization of goals. Knowing foreign languages is the time now is a requirement. That's why we, the young educators, have to teach elementary school integration process with foreign languages we will definitely achieve the goal. There are four basic steps you can take to begin the process of preparation for mediation develop skills in

speech activities. Speech activities four types: listening comprehension, speaking, reading, and writing skills. It's reading and write, read and listen, read and speak, listen and read, listen and write, is done through exercises such as listening and speaking. This is for students. It is important to start with simple, easy words.

Here are some things to look for:

1. Commonly used in communication
2. Frequent in textbooks
3. Basic concepts;
4. In conclusion;

When giving homework.

The time it takes for students to enter and exit the classroom. Conversation in simple words, for example: "hello", "We'll get the books," "Keep the order," "Copy from the board," "I'm done copying," simple words like "hear", "write", "goodbye" and so on in a foreign language teaching a foreign language based on translation and developing speech. Primary the terms of the exercise-questions given in the class textbooks are very simple and concise. Then if the teacher can translate it into a foreign language and memorize it for the students and during the lessons It's a huge achievement. In each topic as a new topic is being introduced will have their own basic concepts. Teach those basic concepts children by repeating it first in Uzbek and then in English remains mechanically in the mind. Basic concepts for a lesson depending on the classes we can specify from three to ten. If it exceeds the child's Decreased learning, boredom, adornment, and explained in Uzbek by the child, they don't want to learn what you teach. Other in later lessons mixes with basic concepts. Which lesson the concepts belong to he does not know that. At the same time, the quality begins to decline. Topics at the end of the lesson, the new words learned in the lesson are repeated and strengthens. Students will be given a short Q&A session. Learn new words that you learned in today's lesson in addition to homework memorization and reinforcement. This is through integrated lessons preparing students for communication, a perfect system quickly, easily and

efficiently helps to master and increase the vocabulary. Elementary school students should be taught a foreign language according to their age and mindset.

The use of innovative technologies in the organization of modern education, to provide students with specific theoretical knowledge in a short period of time to be interested in the lesson in this way, to have the skills for a particular activity and requires the formation of skills.

So, bottom line is that education is important today modern pedagogical and information-communication at all stages of the system introduction of advanced teaching methods using technology, growing to further increase the interest of the younger generation in foreign languages, free in these languages. The training of communicators is fundamental to the education system aimed at improving. At the same time their world civilization achievements and extensive use of world information resources, international creating conditions and opportunities for the development of cooperation and communication intended. The development of foreign language education is the age of the younger generation to train as a qualified specialist in accordance with the requirements, in the consistent study of foreign languages effective use of modern innovation technologies is important has.
