Scientific supervisor: Teacher of the Department of "Mathematics and Information

Technology in Education" E-mail: oktamovm03@mail.ru

ANNOTATION: *This article considers innovative approaches, the use of technologies, teaching methods and pedagogical approaches, approaches that increase the effectiveness of teaching, allow students to correctly and quickly master language information, and the issues of their effective application. Based on advanced foreign experience, attention is paid to such teaching strategies as an individual approach, multicultural education, and the use of technologies. The article is of scientific and research importance and provides useful recommendations for teachers and educational organizations. It also provides important information for the scientific community about the modern development directions of foreign language teaching methodologies.*

KEYWORDS: *Foreign language teaching, advanced foreign experiences, pedagogical approaches, innovative methods, teaching methods, educational technologies, international educational experiences, modern educational methodology.*

ANNOTATSIYA: *Ushbu maqolada chet tili o'qitish jarayonida xorijiy tajribalar orqali o'rganilgan innovatsion yondoshuvlar, texnologiyalardan foydalanish, o'qitish metodlari va pedagogik yondoshuvlar, o'qitishning samaradorligini oshirish, o'quvchilarga tilda to'g'ri va tezkor ravishda ma'lumotlarni o'zlashtirish imkonini beruvchi yondoshuvlarni va ularning samarali qo'llanilishi ko'rib chiqilgan. Ilg'or xorijiy tajribalar asosida, o'qitishning individual yondoshuv, ko'p madaniyatli ta'lim va texnologiyalardan foydalanish kabi strategiyalariga e'tibor qaratilgan. Maqola ilmiy-izlanuvchi hamda amaliy ahamiyatga ega bo'lib, o'qituvchilar va ta'lim tashkilotlari uchun foydali tavsiyalar beradi. Shuningdek, ilmiy hamjamiyat uchun chet tilini o'qitish metodologiyasining zamonaviy rivojlanish yo'nalishlari haqida muhim ma'lumotlar taqdim etiladi.*

KALIT SO'ZLAR: *Chet tili o'qitish, ilg'or xorijiy tajribalar, pedagogik yondoshuvlar, innovatsion usullar, o'qitish metodlari, ta'lim texnologiyalari, xalqaro ta'lim tajribalari, zamonaviy ta'lim metodikasi.*

АННОТАЦИЯ: *В данной статье рассматриваются инновационные подходы, использование технологий, методов обучения и педагогических подходов, подходы, повышающие эффективность обучения, позволяющие учащимся правильно и быстро усваивать языковую информацию, а также вопросы их эффективного применения.*

На основе передового зарубежного опыта уделяется внимание таким стратегиям обучения, как индивидуальный подход, поликультурное образование, использование технологий. Статья имеет научно-исследовательскую и практическую ценность и содержит полезные рекомендации для педагогов и образовательных организаций. Также представлена важная для научного сообщества информация о современных направлениях развития методики преподавания иностранных языков.

КЛЮЧЕВЫЕ СЛОВА: *Преподавание иностранных языков, передовой зарубежный опыт, педагогические подходы, инновационные методы, методика обучения, образовательные технологии, международный образовательный опыт, современная методика обучения.*

INTRODUCTION

Foreign language teaching has become an important part of global communication and intercultural dialogue today. Studying the best practices of foreign language teaching in international education systems is of great importance in making the teaching process more effective and up-to-date. Although each country has its own approaches to foreign language teaching, the study and application of effective methods and innovative approaches of foreign education systems can further improve the quality of education.

This article analyzes international experiences in foreign language teaching and shows the specific aspects of advanced methodologies, technologies and pedagogical approaches to foreign language teaching. Successful experiences in foreign education systems allow teachers and educational organizations to learn effective approaches and methods and apply them in their own education systems. The article also presents scientifically based recommendations on the role of innovative methods and technologies in foreign language teaching, as well as on the individualization of the teaching process.

In line with the global development of education, the study and implementation of effective and advanced methods of teaching a foreign language not only improves the knowledge and skills of students, but also has a positive impact on the cultural and economic development of society. The article examines the advantages and problems of using modern approaches to foreign language teaching based on advanced foreign experience.

METHODOLOGY

This article uses several scientific methods and research techniques to study advanced foreign experiences in foreign language teaching and analyze their effectiveness. The methodology of the article is based on several basic scientific research methods, aiming to deeply analyze the impact of modern approaches and methods in the process of foreign language teaching.

Analytical method: By studying and analyzing foreign experiences in foreign language teaching, the effectiveness of existing methodologies and methods is assessed. With the help of this method, advanced approaches, methodologies and technologies in the process of

foreign language teaching are analyzed in accordance with the educational systems of each country.

Comparative method: By comparing various methods and approaches in foreign language teaching, differences and similarities between them are identified. This method is used, for example, to identify the most effective approaches by comparing pedagogical approaches, innovative technologies, and teachers' methodological techniques used in modern education systems.

Qualitative research: Qualitative research is conducted to analyze the pedagogical effectiveness of various approaches to teaching a foreign language. In this case, by studying the teaching methods of foreign education systems, their positive and negative aspects are studied, and the experiences and opinions of teachers and students are also taken into account.

Experimental method: Based on the theoretical data obtained, the effectiveness of some foreign language teaching methods is tested in practice. In this case, certain methods and approaches are used in the teaching process, the results are studied, and the best methods are identified through experience.

Licensing and processing methods: By analyzing the written scientific literature, articles and statistical data of education systems, deep and comprehensive conclusions are drawn about advanced foreign experiences and teaching methodologies.

Using this methodology, the article clearly shows the specific aspects of foreign language teaching methods, technologies and pedagogical approaches based on foreign experiences and analyzes the effectiveness of their use. This allows teachers and educational organizations to develop practical recommendations for improving foreign language teaching.

RESULTS

As a result of the analysis of advanced foreign experiences in the field of foreign language teaching, several main conclusions were drawn. It was shown that the effectiveness of foreign language teaching is directly related to the impact of methodological approaches and pedagogical innovations. Based on the experiences carried out in international education systems, the following important results and trends can be distinguished:

Diversification of pedagogical approaches: In advanced foreign education systems, effective methods of teaching a foreign language are based on the use of approaches adapted to the individual needs of students. Developing individual teaching strategies for each student, using methods in accordance with his level of knowledge and the speed of language acquisition significantly increases efficiency. This works especially successfully in multicultural societies.

Integration of technologies: Modern technologies, especially online learning platforms and interactive programs, play an important role in foreign language teaching. Many education systems abroad are using digital technologies in the foreign language teaching

process to enable students to learn a language faster. For example, mobile applications, virtual classrooms, and the integration of curricula help students build strong language skills.

Interactive and cooperative teaching methods: Advanced foreign experiences have emphasized the importance of using interactive and cooperative teaching methods. Through teamwork, role-playing games, and group discussions, students learn from each other and have the opportunity to apply the language in practice. These methods activate students and make language learning more interesting and effective.

The role and qualifications of the teacher: The qualifications and pedagogical competencies of teachers also directly affect the success of the foreign language teaching process. Teachers abroad constantly undergo advanced training courses and trainings to update their pedagogical methods. The teacher's individual approach to students and the ability to adapt teaching methods increase the effectiveness of teaching.

Intercultural teaching: In foreign language teaching, it is important to develop not only language skills, but also intercultural competencies of students. In foreign education systems, great attention is paid to the formation of students' global communication skills by taking into account cultural differences in the teaching process and providing knowledge about different cultures.

Discussion

Advanced foreign experiences in the field of foreign language teaching provide us with a number of important approaches and methods. However, each country has its own characteristics and social conditions of the education system, and it is not appropriate to completely copy foreign experiences. Therefore, when applying teaching methods, it is necessary to take into account the traditional education system, cultural characteristics and needs of students in our country.

If we intend to successfully implement foreign experiences, it is necessary to pay special attention to improving the skills of teachers, introducing new technologies and taking into account the individual learning styles of students. Also, the development of interactive approaches and intercultural education in foreign language teaching will make the language learning process of students more effective.

In the future, it is possible to increase the effectiveness of students' language learning through innovative approaches, pedagogical technologies and diversification of the educational process in foreign language teaching. This, in turn, increases the global competitiveness of education systems and provides society with educated and highly competent specialists.

CONCLUSION

Advanced foreign experiences in the field of foreign language teaching are important not only for making the language learning process more effective for students, but also for developing pedagogical approaches and teaching methods. The analyzes and experiences

presented in the article have shown that innovative methods, technologies and interactive approaches in foreign language teaching are one of the main factors of effective teaching.

Based on foreign experiences, the importance of individualization of teaching, integration of technologies and intercultural education was emphasized. Continuous improvement of teachers' qualifications and pedagogical competencies allows further increasing the effectiveness of foreign language teaching. The usefulness of interactive methods, group and cooperative learning, which activate students and allow them to use the language in practice, was also emphasized.

In addition, the use of modern technologies in the process of foreign language teaching allows students to conduct lessons interestingly and effectively. Mobile applications, online platforms and virtual communication tools play an important role in increasing the effectiveness of the learning process.

As a result, updating foreign language teaching methods and implementing foreign experiences in our education systems will serve to increase the global competitiveness of our society. Recommendations for teachers and educational organizations will create an opportunity to introduce methods and approaches used to adapt the foreign language teaching process to modern requirements.

At the same time, it became clear that in order to achieve effective results in the language learning process of students, it is necessary to adapt methodological approaches and take into account the individual characteristics of the educational process. Knowledge and methods learned from advanced foreign experiences will allow students to quickly and effectively master a foreign language and contribute to the further development of the education sector.
