

SCIENTIFIC AND THEORETICAL BASIS OF THE DEVELOPMENT OF READING CULTURE OF ELEMENTARY SCHOOL TEACHERS

Ganieva Maftuna Abduaziz kizi

PhD in pedagogical sciences, teacher, Guliston state university

Abstract: *In this article, the pedagogical aspects of developing the reading culture of future elementary school teachers, the issues of encouraging them to read are discussed on the basis of laws and opinions of thinkers. Opinions about the necessity of reading for future teachers are presented.*

Keywords: *teacher, primary education, pedagogy, necessity, method, development, importance, reading, education, culture, psychology, method*

Today, in our country, great changes are being made in all areas and sectors in order to raise the development of our country to a higher level, the highest goal set in the Strategy of Actions for the five priority directions of the development of the Republic of Uzbekistan in 2017-2021. From this point of view, ideologically and ideologically perfect upbringing of the young generation, pupils and students is an actual issue that is in the center of attention of society members as a purposeful event.

Modern changes in primary education and optimization of the educational process are directly related to the development of the personality of the primary school student. According to scientists and experts in the field, personal development is not possible without the ability to control the flow of information. Based on this, it should be noted that the formation of competence that increases reading and interest in books among students is one of the urgent problems of the modernization of primary education. The ultimate goal of reading competence development is free independent navigation in the world of books. At present, there is no strategic management system based on certain rules of the system of development of reading competence among elementary school students in the requirements of the information society and primary education programs. For this reason, the issue of formation of reading skills among students, especially primary school students, shows its relevance for education at the same time. And in order to find a solution to this, it is certainly a gratifying situation that various scientific researches are being carried out by researchers and representatives of the field. In the deep determination of noble values and traditions in the life of society, in particular, the spiritual-intellectual potential of our people, especially the young generation, consciousness and thinking and there are a number of factors that are of incomparable importance in raising the worldview, raising a well-rounded

person who lives with love and loyalty to his motherland and people, and the most important of them is that special attention is paid to increasing the reading culture.

In this direction, a base of relevant legal and regulatory documents has been created for carrying out organizational and practical work and implementing them in accordance with the requirements of the time.

In particular, the decision of the President of the Republic of Uzbekistan on July 20, 2006, aimed at implementing positive changes and fundamental reforms in this field, "On organizing the provision of an information library to the population of the Republic", dated April 13, 2011 The Law "On Information Library" dated January 12, 2017 "On the establishment of a commission for the development of the system of printing and distribution of book products, increasing and promoting the culture of book reading and reading" On the basis of the Decree of September 13, 2017 "On the Program of Comprehensive Measures to Develop the System of Publishing and Distribution of Book Products, Increase and Promote the Culture of Book Reading and Reading" work is being done. In order to ensure the implementation of the tasks specified in this law and legal documents, the activities of Information Resource Centers in the regions were reformed in accordance with the requirements of the time, the activities of new bookstores were launched, and the quality of service to the population was greatly improved. The contests held among book lovers were popularized on the national scale, and incentive prizes were determined by the head of our state personally. The enthusiasm of young people to read books has increased. It is known from the life experience of our people that our ancestors paid special attention to reading books in raising children. The spirituality of our scholars and creators, crown princes and geniuses such as Great Navoi-u Babur, Amir Temur-u Ulug'bek, was formed by loving books from childhood. Our ancestors enriched the world of imagination and thought, the world of spirituality by listening to folk tales and epics. Literary masterpieces - whether they are examples of folk oral creativity or written works - love and loyalty to the country, mother tongue, family, compatriots, national pride, honor, justice and honesty, in the hearts of our people. It served as the main tool in the formation of the qualities of respect, nobility and generosity. Such masterpieces of spirituality were read, listened to, and most importantly, discussed in the family circle or in the community, based on debates and arguments, the essence of the works was understood and understood. It is important that in such circles, in which young and old participate with equal interest, the ability to observe and reason, logical thinking, a broad worldview and thinking are formed, faith and will are strengthened, oratory skills grow, people's minds also have meaning, He became rich both spiritually and intellectually.

Higher education institutions and their libraries are responsible for solving the following tasks:

- to strengthen students' interaction with books, to make them interested in reading books, to create ample opportunities to use books and other information sources in the educational process ;

- to interest the student in fiction, to strengthen his need to read books, to teach him to read independently, to pay special attention to the formation of artistic and aesthetic taste in students through fiction;

- formation of reading culture among students in a consistent manner;

- getting students used to reading the book independently and mastering it creatively;

- to determine students' skills in communicating with books;

- use of advanced information technologies in the formation of reading culture among students.

In Uzbekistan, great attention is paid to the moral development of young people, their upbringing in the spirit of humanity. In the strategic tasks of developing our country and strengthening its independence proposed by President Sh.M.Mirziyoyev, volunteers, who can help the society in solving social tasks, are superior in training a mentally mature, mature generation and competitive personnel, and a sense of national pride. Education of young people is defined as one of the important tasks. In the implementation of these tasks, "we rely on our national traditions formed over the centuries, the rich heritage of our ancestors" and raising the young generation in the spirit of universal human values built on the basis of Eastern education is a huge responsibility to the society. Promoting the culture of reading among students will prevent many harmful diseases. I.S. Zbarsky emphasized that there are three important components of the formation of reading culture in a person:

- 1) Cognitive component - it is characterized by the formation of students' spiritual consciousness, artistic erudition, worldview.

- 2) Emotional component - determined by the formation of aesthetic feelings, emotional value system, higher feelings in students.

- 3) Behavioral component - students' ability to observe social norms, moral worldview is trained.

In order to form the reading culture of students, the librarian must have a good knowledge of pedagogy and psychology, determine the psychology of reading in students, and also have knowledge of the psychology of interpersonal communication and social psychology. It is necessary for a box store teacher-pedagogue to be aesthetically educated, knowledgeable, and have artistic taste. In developed countries, provision of social, pedagogical and cultural library services to students is part of the sphere of meeting their

basic life needs. The main attention of the teacher and librarian should be aimed at forming the reading culture of the student who is developing as a creative person. The rooms intended for the library should be convenient for the student to get information from various sources. In general, based on the above points, we can conclude:

- The culture of reading among students serves to increase their spiritual outlook and moral consciousness;
- We can observe the manifestation of altruistic motives based on the science of futuvat in the works of Eastern scholars and legends;
- Altruism is one of the national characteristics based on providing selfless help to others;
- It is possible to form altruistic behavior motives in students by promoting the reading of works of art in coaching hours in schools.

In conclusion, the influence of reading on student's creative abilities cannot be overstated. It molds their imagination, enriches their language skills, fosters empathy, hones critical thinking, inspires learning, encourages creative expression, and cultivates a lifelong passion for creativity. As parents, educators, and society at large, it is our collective responsibility to provide children with access to diverse and engaging literature. In doing so, we nurture not only proficient readers but also creative individuals who have the power to transform the world with their innovative ideas and imaginative thinking.
